Design Priorities

• Be client-centered, engaged with the community, building strong alliances

• Align to manage and deliver content and information services to a broadly networked and distributed community

• Foster innovation

• Partner with internal and external entities

• Be data driven with ongoing assessment

Design Parameters

• Service delivery will no longer be driven by the physical library footprint

• Improved efficiencies will require unification through further consolidation of operations and services

• Resource alignment will shift so that digital content, services, and workflows are primary

Constraints

• Budget
  • Contracting resources in short-term
  • Finite resources will be an ongoing reality
